Used by Bank's employees: managers, managers for relations with clients, etc. The application is fairly complex and features various data previews and manipulations: finances, clients' data, clients' employees, credits, contracting of Bank's services, users data, and many other functionalities. - Roles and activities performed: <ul style="list-style-type: none"> - Programmer – implementing new functionalities - Technologies used: Oracle Database, WAS, Spring, JSP, JasperReports, jQuery, Maven, Splunk

- **Title:** PBZCOM@NET
 - **Number of people:** 5
 - **Duration:** June 2010 – September 2016
 - **Project description:** Internet banking application for business clients (companies, organizations and alike). On my arrival the application was build and running in Panther technology and, in fact, it consisted of four distinct applications (basic application, surveillance (admin) application, application for service contracting and application for security certificate issuing). After couple of years my team started working on application's re-engineering - porting applications on Java technologies (Spring, WAS...).
 - Some of the application's features are: payment transactions (in domestic and foreign currencies, national and international payments), various services contracting, card module, investment funds module, functionalities for managing clients' employees and their business roles, etc.
 - There are several types of teh application: basic, admin and demo.
 - **Roles and activities performed:**
 - Programmer – implementing new functionalities and solving production problems
 - **Technologies used:** Prolifics Panther, AIX console, WAS, Oracle Database, Spring, JSP, JasperReports, jQuery, JavaScript, Maven, Splunk
-
- **Title:** UPI i PI/NPI
 - **Number of people:** 1
 - **Duration:** April 2011 – September 2016
 - **Project description:** Applications running on Bank's special standalone document printers. Documents managed by these applications / printers are reports about account balances, transactions, some official business documents, etc. There are two types of these printers that are functionally different: printers for private and printers for business users.
 - **Roles and activities performed:**
 - Programmer – implementing new functionalities and solving production problems
 - **Technologies used:** Prolifics Panther, Oracle Database
-
- **Title:** various processings of client's expenses
 - **Number of people:** 1
 - **Duration:** May 2012 – September 2016
 - **Project description:** Monthly and "on demand" processings of client's expenses on Bank's corporate chanel, integration of FINA's services. These expense processing take place completely in databases and consist of reading, analysis and processing of client data, users data and data that describes services used over a period of time.
 - **Roles and activities performed:**
 - Programmer – implementing new functionalities and solving production problems
 - **Technologies used:** Oracle DB
-
- **Title:** analysis and data modifications in Bank's databases
 - **Number of people:** 1
 - **Duration:** June 2010 – September 2016
 - **Project description:** Various analysis and data modifications in Bank's databases (extracting statistic and analytic data, deactivating clients and client's services, data cleaning...). These actions often involved creating big and complex PL/SQL scripts.
 - **Roles and activities performed:**
 - Proqramer
 - **Technologies used:** Oracle DB

Dates	January 2008 – April 2010
